SUMMARY: Sophomore Computer Engineering student seeking an internship/Co-Op to increase authority abilities, leadership characteristics, and work with a team to deliver innovative solutions for complex business problems

EDUCATION

University of Houston - Houston, TX

Expected Graduation Date: Dec 2027

Bachelor of Science in Computer Engineering

GPA: 3.56

Relevant Coursework: Circuit Analysis, Data Structures & Algorithms Fundamentals of Software Engineering, Operating Systems, Database Systems, Object Oriented Programming

TECHNICAL SKILLS

Programming Languages: Python, Java, C, HTML/CSS, JavaScript, Rust, Bevy, React Native

Frameworks: React, Node.js, Express.js, Niagara, MongoDB, JUnit, Git, GitHub, Gradle, SQL, Jira, Linux

WORK EXPERIENCE

University of Houston - Houston, TX

Computer Lab Assistant

Aug 2024 - Present

- Provided technical support to 50+ students and staff monthly, resolving issues to improve lab efficiency by 20%
- Implemented weekly maintenance for 40 lab computers, including updates, virus scans, and security checks
- Conducted 5 training sessions on popular software applications, enhancing user proficiency
- Delivered one-on-one guidance to 15 users monthly, improving technical confidence and productivity

LEADERSHIP EXPERIENCE

ColorStack - University of Houston

Events Chair

Jun 2025 - Present

- Planned and executed 5+ technical and career events per semester, boosting engagement by 40%
- Partnered with 10+ companies and campus groups to support 100+ underrepresented students in tech
- Led a team of 4 to host the largest event of the semester, driving 60% new member sign-ups
- Initiated inclusive spaces for networking, internship prep, and professional growth

National Society of Black Engineers - University of Houston (NSBE)

FEB Programs

Aug 2025 - Present

- Won 1st place in NSBE's STEM Craft competition out of 10+ teams
- Raised \$327 through fundraising to sponsor member attendance at the regional conference
- Mentored 5 middle school students to build a sailboat in a pre-collegiate STEM initiative
- Supported outreach and service events promoting STEM education and creativity

ENGINEERING PROJECTS

The Move – RSVP Component

May 2025

- Designed and built an RSVP feature for a social event-sharing app
- Installed inline RSVP (Yes/No/Maybe) to boost event engagement by 30%
- Developed real-time updates for 10+ simultaneous users during testing
- Created rich message blocks to reduce coordination friction and improve UX

Physics-Based Robot Fighting game

February 2025

- Engineered a 1v1 robot fighting game with 3 customizable robots and 2 arenas
- Built a robot creator and arena editor for 5+ unique gameplay setups
- Formulated 10+ playtests to refine user-generated content and replicability
- Executed 3 dynamic arena mechanics to enhance player challenge

Supervision Aerial Drone Project

March 2025

- Created quadcopter and tested schematics I designed to ensure efficient power distribution and secure safety measures
- Programmed and debugged microcontroller (C++) to interface with gyroscope and accelerometer using I2C protocol Soldered and performed hardware debugging to ensure effective flow of power between propellers and other peripherals
- Designed the auto-leveling system using a PID controls system I programmed on the microcontroller
